## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statement filed 06/22/06 (see the lines drawn through) fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 17 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Hosur et al (US 6,917,311).

Regarding claims 1 and 18, Hosur teaches a wireless transmission apparatus comprising: at least one transmission antenna (see fig.1), and a transmission section that transmits a preamble signal and a data signal via the at least one transmission antenna (see column 4, lines 16-25), wherein the transmission section uses a preamble

subcarrier allocated per transmission antenna transmit the preamble signal (see column 2, lines 1-12) and uses a data subcarrier having a frequency different from the preamble subcarrier to transmit the data signal (see column 1, lines 44-54).

Regarding claim 2, Hosur teaches a detection section that detects an idle signature subcarrier out of a plurality of signature subcarriers that are used to transmit a signature signal and have frequencies different from the data subcarrier (see column 1, lines 44-54), transmitting the data signal, the wherein, when transmission section transmits the signature signal using the idle signature subcarrier detected (see column 2, lines 1-12).

Regarding claim 17, Hosur teaches a wireless communication network system comprising the wireless transmission apparatus according of claim 1 (see fig.1).

#### ***Allowable Subject Matter***

4. Claims 3-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Regarding claim 3, Hosur fails to teach the number of the plurality of signature subcarriers corresponds to the total number of transmission antennas that can transmit the data signal in parallel to a wireless reception apparatus to which the data signal is addressed, and the detection section detects at least one idle signature subcarrier out of the plurality of signature subcarriers.
